CLAIMS

1. A method of mounting a printing plate on a cylinder, the method comprising the steps 1 2 of: 3 a. establishing a temperature difference between the plate and the cylinder, a 4 temperature of the plate exceeding a temperature of the cylinder; and b. wrapping the plate around the cylinder, the temperature difference causing the 5 6 plate to shrink against the cylinder. 7 2. The method of claim 1 wherein the temperature difference is at least 3 °C. 1 2 3. The method of claim 1 wherein the temperature difference is established by heating 1 the plate. 2 3 4. The method of claim 3 wherein the plate is heated uniformly. 1 2 5. The method of claim 3 wherein the temperature difference is established by cooling 1 2 the cylinder. 3 1 6. The method of claim 1 wherein the plate is drawn from a roll disposed within the

PTK-228 11

interior of the cylinder and advanced around an exterior surface of the cylinder.

2

1 8. The method of claim 6 wherein the exterior surface of the cylinder is cooled.

2

1

3

4

5

6

- 9. Apparatus for mounting a printing plate on a cylinder, the apparatus comprising:
- a. means for establishing a temperature difference between the plate and the cylinder such that a temperature of the plate exceeds a temperature of the cylinder; and
 - b. means facilitating wrapping the plate around the cylinder, the temperature difference causing the plate to shrink against the cylinder.

7

1

2

10. The apparatus of claim 9 wherein the facilitating means comprises registration pins and clamps.

3

1

- 11. The apparatus of claim 9 wherein the plate is drawn from a roll disposed within the
- 2 interior of the cylinder and advanced around an exterior surface of the cylinder, the
- 3 facilitating means comprising:
- a. means, within the interior of the cylinder, for supporting the roll of plate material; and
- b. means, within the interior of the cylinder, for receiving plate material extending
 over a travel path from the roll of plate material over the exterior surface of the
 cylinder.

9

- 1 12. The apparatus of claim 11 wherein the means for establishing a temperature
- 2 difference comprises means for heating the roll.

3

- 1 13. The apparatus of claim 11 wherein the means for establishing a temperature
- 2 difference comprises means for cooling at least the exterior surface of the cylinder.

3

1 14. The apparatus of claim 9 wherein the temperature difference is at least 3 °C.

2

- 1 15. The apparatus of claim 9 wherein the means for establishing the temperature
- 2 difference comprises means for heating the plate.

3

- 1 16. The apparatus of claim 15 wherein the heating means comprises a heated surface
- 2 conforming substantially to the plate.

3

1

- 17. The apparatus of claim 9 wherein the means for establishing the temperature
- 2 difference comprises means for cooling the cylinder.

3
